COLLEGE COURSE REGISTRATION AND SUBJECT ENROLLMENT SYSTEM

java Programming Lab / Mini Project

AJAY KUMAR T

25BCS102

Department: B.SC.Computer Science

Mentor / Guide: Aravind

INTRODUCTION

Overview & Purpose

- Automates student course registration and subject enrollment process.
- Reduces manual work and provides quick, accurate access to course data.

Problem Background & Motivation

- Traditional systems are time-consuming and prone to errors.
- Need for a fast, reliable, and digital registration solution.

INTRODUCTION

Significance of the Project

Improves efficiency and reduces workload for staff and students.

Ensures accurate data management and easy accessibility anytime.

OBJECTIVES

- To develop an automated system for easy course registration and subject enrollment.
- To maintain accurate and secure student and course data.
- To provide a user-friendly platform accessible anytime for students and administrators.

PROBLEM STATEMENT

Current Issues / Gaps in Existing Systems

- Many colleges still use manual or semi-digital registration systems.
- Lack of real-time updates on course availability and enrollment status.

Limitations / Inefficiencies

- Time-consuming process with long queues and delays.
- High chances of human errors and data duplication.
- Limited accessibility (only available on campus or specific time).

PROBLEM STATEMENT

How the Project Addresses These Challenges

- Provides a fully automated online registration system.
- Offers real-time updates and instant confirmation of enrollment.
- Ensures accurate data management with secure and easy access anytime.

SYSTEM REQUIREMENTS

Hardware Requirements

- Computer system (Desktop/Laptop) with minimum 4GB RAM
- Processor (Intel i3 or above)
- Storage device (Hard Disk/SSD with at least 256GB capacity)

Software Requirements

- Operating System (Windows / Linux / macOS)
- Programming Language (Java)
- Database Management System (MySQL / Oracle)

SYSTEM DESIGN

Structure & Workflow of the System

Flow:

Student → Login → View Courses → Select Subjects → Enroll → Confirmation → Database Update

SYSTEM DESIGN

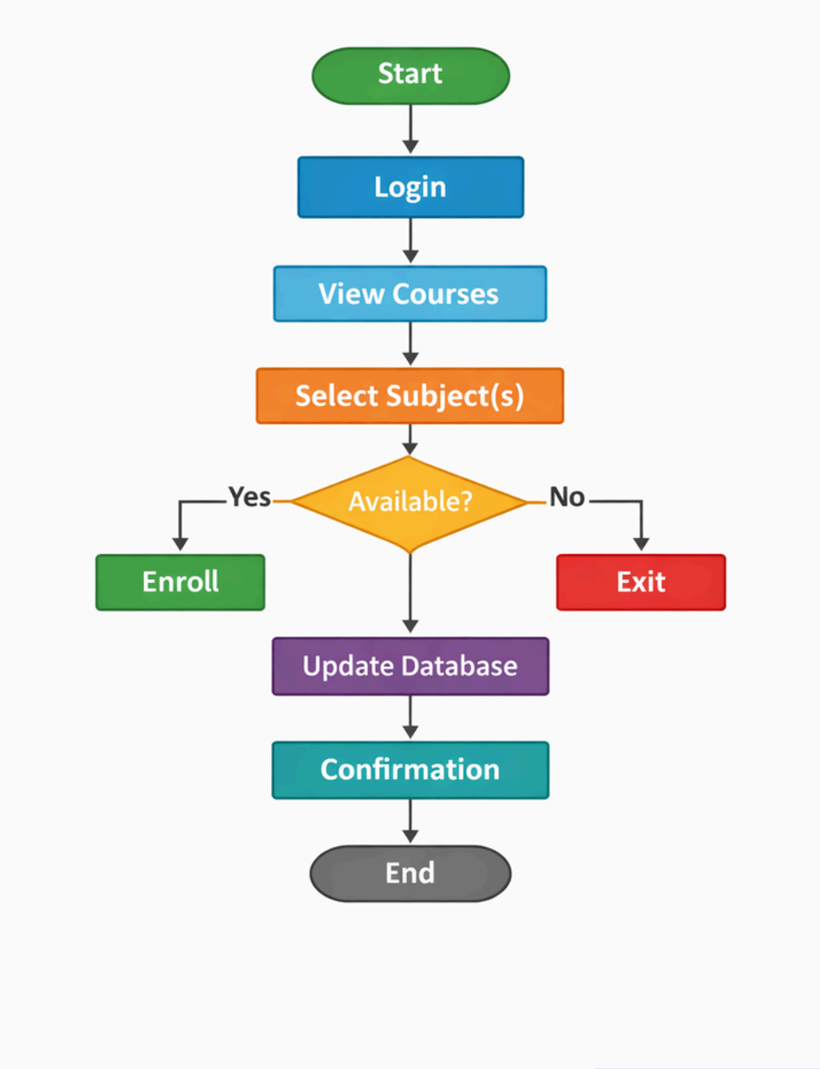
[Database]

MODULE DESCRIPTION

Input Module: Collects user input for the system.
Processing Module: Performs logic and operations on data.
Output Module: Displays results to the user.
File Handling Module: Stores and retrieves data efficiently.

ALGORITHM / FLOWCHART

- Start
- Login with student details
- Display available courses
- Select subject(s)
- Check availability
- If available → Enroll student
- Update database
- Show confirmation
- End



IMPLEMENTATION

Loops & Conditional Statements: Used to control program flow and decision-making.
Functions & Arrays: Used to organize code and store multiple data efficiently.

OUTPUT SCREENS

INPUT SCREEEN

1. Add Student
2. Enroll Subject
3. View Records
4. Exit

Enter choice: 1
Enter ID: 101
Enter Name: Ajay
Student added!

Output Screen

1. Add Student
2. Enroll Subject
3. View Records
4. Exit

Enter choice: 2
Enter Student ID: 101
Enter Subject: Data Structures
Subject enrolled!

Enter choice: 3

ID: 101
Name: Ajay
Subjects: [Data Structures]

RESULTS & DISCUSSION

Results

- The system successfully allows adding students, enrolling subjects, and viewing records.
- Data is processed accurately with immediate display of enrollment details.

Discussion

- The project simplifies the course registration process compared to manual methods.
- It is efficient, user-friendly, and can be further improved by adding database and GUI support.

CONCLUSION & FUTURE ENHANCEMENT

The College Course Registration and Subject Enrollment System successfully automates the process of adding students, enrolling subjects, and managing records, reducing manual work and improving accuracy. It provides a simple and efficient solution for academic management. In the future, the system can be enhanced by integrating a database for secure storage, adding a user-friendly graphical interface, and including advanced features like timetable generation and online access for better usability.
